

# ELI 230 Technical System Requirements

## Overview

The ELI 230 is a 12-lead resting ECG diagnostic electrocardiograph capable of acquiring, printing, and storing adult and pediatric resting ECG test data. The device is equipped with Mortara Instrument's VERITAS™ resting ECG interpretation algorithm using age and gender specific criteria. The VERITAS algorithm can provide an over-reading physician with a silent second opinion through diagnostic statements output on the ECG report.

Once exams are acquired, they can be downloaded to a USB storage device and transferred to a PC. With a site installation of ELI Link, those ECGs can then be transmitted with encryption in various formats from the PC.

The device can operate on a single sealed lead-acid battery or AC line power.
